

Dolloff Dam August 8, 2022

Release Pulse at Dolloff and Drowns Dams, August 8, 2022,
Steve Soreff, MD

According to Tracie Sales, Rivers & Lakes Programs Administrator, NH Department of Environmental Services, “The release pulse was started this morning, (August 8) with flow coming from both Pawtuckaway Lake and Mendums Pond. The rain over the weekend had little effect on flow in the river, with daily flows continuing to drop from 9.4 cfs on Friday to 8.8 cfs on Saturday to 8.7 cfs on Sunday. The flow at this time of year that would eliminate the need for a pulse release is 16 cfs for two days in a row.” Sales indicated that stop logs would be back in place this Wednesday. This release is yet more evidence of the area’s drought.
